SAINT-SACREMENT PARK: A NEW KIND OF PARK

CONTEXT

Date: April 2013

City: Terrebonne, Quebec

At the corner of Des Seigneurs and Saint-Sacrement street, Saint-Sacrement Park became, without a doubt, a gathering place of choice. On site you will find fountains, relaxation areas, exhibitions, skate park, outdoor stage show with natural platforms, a huge parking lot and more. Now that the old park has been revitalized, the new multifunctional public space designed for citizens of all ages allows many activities to take place.

MANDATE

What stand out most, comparatively to other parks, is definitely the skate plaza. Instead of traditional skate park structures, the fitting out imagined by BC2 group and shaped by Quattro Lighting, allow skateboarder to use and enjoy part of the new urban furniture. The materials used to execute the different spaces were chosen with constant attention to its integration in the environment

The attention is therefore scope on designer's privileged places, adding character to the urban furniture specially designed for this unique project.

BC2 architect group made creative use of natural and conventional materials as much as modern and sustainable materials. They mixed harmoniously stainless steel, marble, granite, wood, painted steel and aluminum.

Tree grates are particularly attractive structures in the achievements of diverse and varied projects. It's only recently that architects, designers and manufacturers recognised its potential by diverting it toward decorative and functional use. Tree grates made by Quattro Lighting allow a bigger planting hole, protect and filter while highlighting the trees with a discreet but effective light. Trees can grow and develop properly in a urban environment.

CHALLENGE

Quattro's approach consists of implanting methodologies to respect the environment in creating and designing modern streets furniture that will decorate and optimise the urban environment of the future.

SOLUTION

Easy to install, no need for maintenance and requiring less energy, LEDs allow new ways for integrating lights to furniture. The backlit bases of the railings and ramps create a harmonious luminous line of light but discontinuous that modulate space inside the skate plaza area.

QUATTRO REALISES REMARKABLE PROJECTS

Quattro is a Quebec based company located in Longueuil. It specialises in manufacturing decorative and functional light structures for municipal lighting. Whether you are an architect, an urbanist, an engineer or a building contractor, Quattro will know how to help you throughout your project. You will benefit from the aesthetics, the assembling simplicity and the performance of our high quality energy efficient lighting solutions, as well as from the courteous service and the efficient partnership of a professional team.

For Quattro, developing and managing lighting projects implies and involves knowledge of the environment and of the people, technology, materials, manufacturing and architecture. All in order to ensure a safe, comfortable and attractive urban atmosphere. We will turn your idea into a remarkable project.

QUATTRO

Remarkably brilliant
